

The Ultimate Distraction Therapy for Kidz

tournikidz™

Single-use Tourniquet

Distraction Therapy

Colourful design, non-medical appearance to distract from venepuncture procedure. The Child can take away 'Ellie' the elephant or 'Sammy' the snake, as a souvenir of their visit.

Single-Use

Designed for effective infection prevention.

Single-handed Operation

Intuitive, safe and effective in the management of blood sampling and IV cannulation.

Single-handed Operation

Strong, yet soft next to the skin avoiding pinching and discomfort.

ShotBlocker®

Minimizing Needle Injection Pain
During Injection Administration

Immediate Effect

The contact points on the underside saturates the sensory nerves distracting the patient from the pain signals caused by the needle poke. No waiting for topical anaesthetics to take effect.

Easy to Use

Just press ShotBlocker® firmly over the injection site and administer the shot through the opening.

Versatility

Use for home injections or take with you to the healthcare establishment.

Economical

Less costly than aesthetic creams and freezing sprays.

= Reduction of Anxiety and Phobia to Needle Puncture.
The complete Distraction
Therapy Kits for Kidz.
