4345I/TPEOM/ASEPI00

NHS Order Code: FVH85I90 (I bag of 25)

FVH85I89 (I Pack of 100)

Sustainable, Cost-effective

With increasing focus on the provision of more sustainable product solutions, combined with the pressures on the NHS to reduce costs, the Tournistretch Reusable is comfortable to apply, does not pinch the patient's skin and can be applied and released with one hand. Tournistretch Reusable offers substantial cost savings, as low as 1p/day under typical usage.

Reusable, Cleanable, Comfortable

Tournistretch Reusable is a latex-free, elastic tourniquet can be used on delicate skin, patients from newborns to seniors. It is designed for multiple use and can be cleaned with a disinfectant wipe between use to minimize risk of cross-infection. It has been tested for multiple reuse cases and can be used according to each hospital's protocols - either as a daily tourniquet (discard at end of each day) or until it becomes worn and can be discarded.

Simple Cleaning and Disinfection

Tournistretch Reusable is cleaned and disinfected after use with a universal wipe such as Clinell Universal Wipes*

*compatibility data held on file shows Tournistretch Reusable withstands more than 300 cleanings.

Disposal Protocol - the Tournistretch dispensing pouch can be recycled (LDPE4 mixed plastic).

The tourniquet is disposed in clinical or hospital general waste (clinical waste if contaminated).
